Summary

Computer Science undergraduate specializing in scalable backend architectures, full-stack web applications, and AI-driven automation. Proficient in React, Node.js, and PostgreSQL, with hands-on experience drastically reducing API response times and engineering high-performance data extraction tools. Supported by strong algorithmic fundamentals and data structure proficiency (400+ LeetCode challenges completed).

Education

National Institute of Technology, Raipur

Bachelor of Technology in Computer Science and Engineering

2027

6.9

Experience

Vantiris Technologies LLP

Engineer Trainee Intern

03/2026 - Present

Remote

- Spearheaded the construction of a **Data visualization** platform that parsed, mapped, and facilitated interaction with large-scale website sitemaps, leading to a 30% increase in data parsing efficiency, and collaborated on an intuitive UI allowing users to toggle between complex radial/horizontal tree graphs and list views.
- Deployed advanced evasion techniques to bypass **CAPTCHAs, Cloudflare protections, and IP blocking**, leveraging proxy rotation and concurrent request handling to achieve 40% faster data retrieval.
- Developed a custom **RAG chatbot** that ingested over 900 web pages to provide highly accurate, hallucination-free answers to proprietary company queries. Also constructed an automated testing pipeline evaluating varying chunk sizes and Top-K retrieval matrices, generating actionable performance reports that identified and resolved 2,000ms LLM generation bottlenecks.

Projects

CarRentalApp | React, Node.js, PostgreSQL, JWT

10/2025

- Designed and built 12 secure RESTful APIs using Node.js and Express.js with JWT authentication and RBAC for protected user and admin operations.
- Reduced average API response time by 40% by optimizing database queries, improving routing logic, and enhancing backend request handling.

Job Bot | JavaScript, Python, CSS

03/2026

- Engineered a custom Chrome extension using JavaScript, HTML, and CSS to automate complex data entry across multi-page job portals, reducing average application completion time by 85%.
- Incorporated an AI vision model fallback (Llama 3.2 Vision) to visually map hidden or non-standard UI elements, improving automated form completion rates by 15% and significantly reducing manual data entry errors.
- Designed a secure, serverless architecture utilizing the Chrome storage API to locally manage sensitive user data, eliminating reliance on backend databases, reducing hosting costs to 0, and achieving 100% data retrieval uptime.

Technical Skills

- **Languages:** Python, C++, SQL, JavaScript
- **Web Technologies:** React, Node.js, Express.js, HTML, CSS, RESTful APIs, JWT
- **AI & Machine Learning:** LLMs (Llama 3), Prompt Engineering, NLP, Scikit-learn, Pandas, NumPy
- **Tools:** Git, GitHub, Postman, Linux, Chrome Extension API

Achievements

- Ranked in the top **1.1 percentile** in the JEE Mains Exam.
- Secured a **Top 5 finish** out of 120+ teams at the **NIT Raipur Annual Hackathon**, prototyping an AI-powered full-stack web application within a 48-hour sprint.
- Solved over **400+** problems on **LeetCode**, significantly strengthening proficiency in data structures and algorithms.

Leadership and Responsibility

- Captained and represented NIT Raipur in the Inter-NIT **Badminton Tournament**, exhibiting leadership, teamwork, and competitive excellence.
